from Yokogawa Europe**

Securing the IT/OT ecosystem requires a holistic defense-in-depth approach. The presentation will address various system level scenarios with consideration to the attack continuum prevent, detect & respond. Industrial Internet of things are becoming more & more important to plant owners.

The plant managers are mostly faced/ are concentrating with challenges such as productivity, efficiency & lowering total cost of ownership instead of looking permanently after the automation security concept of their plant. Showing clearly customer expectation towards automation manufacturers & their Digital Transformation Journey. The presentation will cover the secure remote services & why it is so important to define secure network architecture, perform segregated protection & to have granular access control. It becomes clear that the Secure Remote Services solutions are gaining in importance every day. Learn about Yokogawa approach in collaborating with customers in adhering to the industry Cyber Security standards & regulations.

Chee Hoe Lee:

Chee has over 20 years of experience in Industrial Cyber Security spearheading as Security Engineer, Consultant, Project Manager, Cyber Security Sales & Business Development across various industries. He has Distinction Degree in Information Technology from Qid University of Technology & holds the Certified Information Systems Security Professional (CISSP), GICSP certifications from GIAC & ISA/IEC 62443

certification. He had participated as a panel speaker during the SPE Symposium for Oil & Gas industry & CS4CA MENAT in Dubai & has participated as a speaker during the ICS Cyber Security Conference in Singapore. Chee is the program governance for one of the world's largest Oil & Gas customer in overseeing deployment, architecture management & managed services for Cyber Security.
